

paid at a higher specialist-level salary. Salaries and housing costs for physician trainees are now paid for by the Government of Lesotho. The Government of Lesotho also pays the salaries and housing costs for two physician specialist educators.

Outcomes & Evaluation: The Boston University School of Medicine certifies that graduates successfully complete the program as outlined in the detailed curriculum documents approved by the CHE. To date, 2 physicians have graduated from the FMSTP and are the first Lesotho-trained specialists in the country.

Going Forward: Our program has seven students who are enrolled and ready to begin training in January 2015. We are also working with the Ministry of Health to expand our program to include additional hospitals in Lesotho's southern districts.

Funding: Funding has been received from the Kellogg Foundation, PEPFAR, and the Global Fund.

Integrating social medicine into international curricula: A case study across Uganda and Haiti

M. McCoy¹, C. Fox², A. Sattler³, C. Curry⁴, A. Finnegan⁵, M. Morse⁶, Z. Sacks⁷, J. Wallace⁸, M. Westerhaus⁹; ¹University of Minnesota, Isanti, MN/US, ²Physicians for Haiti, Somerville, MA/US, ³SocMed, Isanti, MN/US, ⁴University of Miami/Jackson Memorial Hospital, Miami, FL/US, ⁵University of St. Thomas, St. Paul, MN/US, ⁶Instructor, Harvard Medical School; Affiliate, Dept of Global Health Equity, Boston, MA/US, ⁷Ventura County Medical Center, Santa Barbara, CA/US, ⁸University of Minnesota, Minneapolis, MN/US, ⁹Center for International Health, University of Minnesota, St. Paul, MN/US

Program/Project Purpose: Medical education worldwide fails to adequately instruct health professionals in the social causation of disease. This can lead to partnerships between resource-limited and resource-rich settings that are well-intentioned but offer limited capacity building, or to health service delivery that lacks integration of social medicine. To address this gap, the nonprofit organizations SocMed and Physicians for Haiti (P4H) collaborated to adapt a social medicine curriculum created by SocMed and implemented in Uganda. The aim of this partnership is to enable future global healthcare leaders to become agents of change for medical education.

Structure/Method/Design: The goal of the SocMed-P4H partnership is to apply the successful Ugandan curriculum to a Haitian context, creating a transferable model of collaboration in medical education that fosters partnership-building between local and international students, critical self-reflection, and application of concepts through pragmatic advocacy skills. SocMed and P4H work with implementing partners Lacor Hospital (Uganda) and the University of the Aristide Foundation (Haiti) to create a curriculum that can be tailored to different contexts and levels of health profession students. This partnership was actualized through a yearlong process of dialogue between SocMed and P4H regarding adaptation of the Ugandan curriculum to a Haitian context and broader student base. Participating Haitian students are nominated by their universities, and international candidates are recruited via email outreach and are chosen based on a written application and interview. Haitian faculty and teaching assistants are deeply involved in curriculum planning and teaching, and past students are encouraged to pursue continuing involvement. A core professoriate of experienced instructors from SocMed and P4H provide continuity and international perspective to both courses.

Outcomes & Evaluation: To gauge the success of the course, a monitoring and evaluation system was established that includes student, professor, and institutional feedback. The course has been very well-received overall: of the 38 students involved in the Haiti course to date (evenly split

between Haitian and international), 94% have been satisfied with their experience in the course and 97% have agreed that the course would impact the way they practice medicine in the future. Feedback has particularly emphasized the value of site visits to hospitals and nonprofits around Haiti and the opportunity to work closely with peers from different backgrounds.

Going Forward: Meeting the needs of a diverse classroom and helping students translate concepts into advocacy efforts remain top priorities. Course leaders will strive to broaden the range of participants, create stronger avenues for alumni collaboration, and provide pl

Funding: The course is financed through P4H resources, fund-raising efforts, and student tuition.

Collaborating to develop an HIV/AIDS master's specialty curriculum for advanced practice nurses in India

L.L. McCreary¹, L. Nagothu², T.L. Hughes¹, K.F. Norr¹; ¹University of Illinois at Chicago College of Nursing, Chicago, IL/US, ²Bel-Air College of Nursing, Panchgani, IN

Program/Project Purpose: India has over 2 million persons living with HIV, and prevalence continues to increase in some areas and target groups. Over a 10-year relationship, Bel-Air Hospital and University of Illinois at Chicago (UIC) College of Nursing have worked together, first to identify the need for a college of nursing and then to establish the Bel-Air College of Nursing in Panchgani, India. The aim of the latest step in our collaboration is to develop a master's-level program to prepare nurse leaders for HIV/AIDS care and prevention in India. In this presentation we will describe an innovative Master of Science in Nursing program, collaboratively developed by Bel-Air and UIC Colleges of Nursing to prepare advanced practice nurses as clinicians, educators and researchers who will provide comprehensive HIV/AIDS care and prevention in rural and urban hospital and community settings in India.

Structure/Method/Design: Through exchange visits to UIC and Bel-Air and frequent Skype conferencing, faculty collaborated to develop a MSc HIV/AIDS curriculum that includes: HIV-related virology, immunology, pathophysiology, co-morbidities, and pharmacology; Assessment and evidence-based management of complex clients; Continuity of care and adherence to treatment through integrated behavioral change approaches; Indian contextual factors affecting HIV care and prevention, e.g., stigma, cultural beliefs and socioeconomic disparities; Engagement of individuals, families and communities in universal prevention and compassionate care of those infected and affected by HIV/AIDS. UIC faculty have also consulted on innovative methods for teaching course content for this new curriculum and shared resources for developing course content.

Outcomes & Evaluation: The curriculum received approval by the Indian Nursing council and Maharashtra University of Health Sciences; five new MSc-level faculty were hired and the first class of 8 students matriculated in October 2014. Graduates will be prepared to: Manage and evaluate advanced-level care of complex clients living with HIV and other co-morbidities such as tuberculosis; Serve as a knowledge resource/educator to nurses and other health care providers to provide competent, compassionate HIV/AIDS care in a non-stigmatizing manner; Design, implement and evaluate prevention and support programs for families and communities; Conduct HIV-related research; Disseminate research and best practices through presentations and publications; Provide evidence to influence policy-making.

Going Forward: This ongoing collaboration will continue to integrate the expertise, knowledge and resources of each partner,
